The solution for your enterprise search

xdot search

xdot search is a professional enterprise solution for quick and easy search operations across business servers and the internet (enterprise search). One search software covering all systems – both intuitive and navigable.

All available company data sources are factored into a complete text search – regardless of storage location or format. xdot search is available as a centralised, server-based or decentralised search solution for your company.

The solution can be expanded or customised in a variety of ways on account of xdot search's modular construction. We guarantee high search quality, transparent licensing and good scaling.

Flexible usage

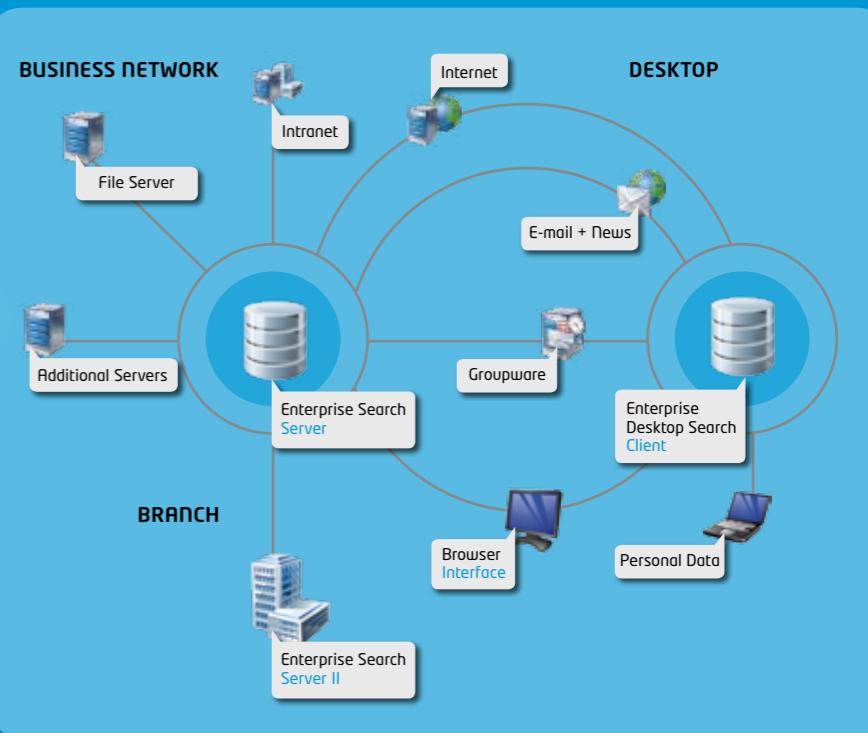

Are you always on the go? No problem: you can use xdot search no matter where you are. Whether you access it via a web browser, or directly from an application or a mobile device, your data protection is guaranteed at all times.

Semantic searches

Data serves to establish broader knowledge. In order for that to happen, the data must be intelligibly processed and analysed for semantic relationships.

We have equipped xdot search with a semantic ontology that contains over 80,000 nodes as well as 150,000 phrases and key words for data analysis. The default installation can be extended at any time with customised specialist ontologies. For optimal search results.

One search for all data >

At a glance:

- generate active knowledge management
- create information transparency
- gain a competitive advantage
- optimise business processes
- use time effectively

Knowledge at the click of a mouse

xdot search Client

xdot search Client is the decentralised search solution for Windows or Linux desktops. It searches all local data storage – quickly and conveniently.

Local searches

The xdot search Client enables direct connection to local applications like Lotus Notes or Microsoft Outlook when performing a search. Businesses can integrate search functions directly into Windows, using the existing open-search interface. In addition, further functions can be integrated directly into the results list: it's as easy as typing "send document via Outlook".

The optimal combination

Combine xdot search Client and Server for a comprehensive search. This way, you can browse all local data as well as data sources within your company simultaneously.

Wiki xdot search

Our Wiki site is the central platform for information regarding xdot search. Whether you need quick info or want to use our comprehensive knowledge base, you have come to the right place. wiki.xdot.de

One search of all sources

xdot search Server

xdot search Server is the centralised, server-based search solution for Windows or Linux environments. It is ideal for larger application environments with diverse data sources.

Advantages of the server-based search solution:

- connection of multiple servers
- integration of further systems, e.g. Microsoft Exchange, Lotus Notes or CRM systems
- selectable connectors
- modular design: a variety of options for expanding/customising
- high scalability and transparent licensing

Multiple sources – always secure

xdot search Server generally incorporates a variety of selectable connectors. This allows for the display of 400 different file types, complete with a preview feature. The solution completely supports existing user management and authentication agreements so that users only find what they are authorised to access.

Do you have frequent problems with incorrectly archived data, moved folders and extensive authorisation rights? xdot search can help here as well. If you want to know even more, just set alerts for defined search terms. The integrated crawler for intranet and internet sites delivers the results directly.

Software made in Germany

xdot search is developed in Germany. We adhere strictly to current data protection policies so that your data stays where it belongs – within your company.

Functions of xdot search:

- search-as-you-type
- typo-tolerant searches
- multi-faceted navigation
- knowledge cockpit
- OCR functionality

The Advantages:

- platform-independent
- easy-to-integrate (API)
- standard components and interfaces
- Web 2.0 standards
- SOLR-based solution

Using knowledge effectively

Services

Take advantage of the expertise and experience of our enterprise search and knowledge management specialists. We always find the best solutions for everything – from consulting and conception to support. And our customers get the best costs and competitive advantage.

Consulting

Benefit from our know-how and extensive experience. Whether for defining objectives, situation analysis, or concept development, we advise you in each phase of your project. This includes the adoption of a provisions catalogue as well as the training of employees in accordance with your needs.

Customising

In developing our enterprise search solution, we have placed significant value on flexible integration possibilities (API). In this way, we can make the components of a search solution software available to third-party applications. Or, we can also customise xdot search Server and xdot search Client completely according to your wishes.

Knowledge management

Do you want to prepare your company for the future? Then you need efficient internal knowledge management. Come learn about the basics in a workshop where we highlight the possibilities and potential of knowledge management systems, as well as its concrete applications.

Our know-how in your products

Solutions

Knowledge is the most important resource in modern businesses. Are you looking for a solution to quickly access relevant information? We're available to assist you with this. We develop solutions to perfectly meet your needs.

OEM solutions

Thinking about providing your own search solution? Either integrated within your own product or as a stand-alone solution? We'll take care of it. xdot search offers various integration options for the implementation and realisation of searches for existing software solutions.

Mobile solutions

Smartphones and tablets are hallmarks of the business world. Thanks to xdot search and modern Web 2.0 standards, you have secure access to your business network and your data on the go. You can use your internal knowledge resources worldwide, securely, and regardless of the type of device.

Knowledge portals

Do you want to get more from the knowledge in your company? We'll help you set up a knowledge portal so that the available knowledge is used effectively and efficiently. The addition of further tools like social features or sharing functions only improves the cooperative capacity within the company.
